

## **Former Kingswood golf course site**

### **Maintenance Update – 18 October 2019**

#### **Approved tree maintenance**

The safety of neighbouring residents, workers on our site, and any member of the community who may accidentally or purposefully enter the site is our highest priority.

In May 2019, an independent arborist performed a safety assessment on approximately 1,500 trees on the site. As a result, City of Kingston approved the removal of dangerous trees, together with removal of limbs and pruning of other trees.

This has occurred with Council investigating the site, and they have confirmed works are being undertaken in full compliance with the permit.

#### **Weed control and grass regeneration**

With regard to weed removal and care, the arrival of warmer months means we're entering peak growing season for grass and noxious weeds, and for fire risk. We are legally required to manage these issues on our site.

An approved product from the *NuFarm* range of herbicides was used responsibly and at low levels to manage these weeds. Sprayed areas are already showing signs of re-growth within a matter of weeks.
